Supplementary Data Guide

Supplementary Table S1. Additional results for Aim 2: Testing whether selection pressure on megalencephaly-associated genes is linked to measures of primate brain size when *Callithrix* and *Microcebus* are excluded

Lambda values, coefficient estimates (for the predictors in the third row of table), and associated p-values are provided for 4 models for each gene, including:

Absolute brain size models

- 1) $\log(\text{brain size}) \sim \log(\text{dN/dS})$
- 2) $\log(\text{brain size}) \sim \log(\text{dN}) + \log(\text{dS})$

Relative brain size models

- 3) $\log(\text{brain size}) \sim \log(\text{body size}) + \log(\text{dN/dS})$
- 4) $\log(\text{brain size}) \sim \log(\text{body size}) + \log(\text{dN}) + \log(\text{dS})$

There is of a significant association between dN/dS and absolute for *GPC3* and *TBC1D7*. Significant p-values ($p < 0.05$) are in bold. Est = coefficient estimate; N spp = number of species included in models. *Models were run with lambda = 1 since log-likelihood plots of lambda were very flat.

Supplementary Table S2. Root-to-tip dN/dS, dN, and dS values for candidate genes 1-8

This table contains root-to-tip dN/dS, dN, and dS values for 8 of the 16 candidate genes: *AKT1*, *AKT3*, *BRWD3*, *CCND2*, *EXT2*, *GPC3*, *HEPACAME*, *KIF7*. These values were obtained from PAML branch models, provided in the methods section. Gray boxes containing 'NA' values indicate instances in which exon sequences could not be aligned for the respective species (due to extensive gaps in that area of the genome).

Supplementary Table S3. Root-to-tip dN/dS, dN, and dS values for candidate genes 9-16

This table contains root-to-tip dN/dS, dN, and dS values for 8 of the 16 candidate genes: *MTOR*, *OFD1*, *PIK3CA*, *PTEN*, *RIN2*, *SPRED1*, *STRADA*, *TBC1D7*. These values were obtained from PAML branch models, provided in the methods section. Gray boxes containing 'NA' values indicate instances in which exon sequences could not be aligned for the respective species (due to extensive gaps in that area of the genome).

Supplementary Table S4. Accession numbers for candidate genes 1-8

This table contains accession numbers for sequences used in analyses for 8 of the 16 candidate genes: *AKT1*, *AKT3*, *BRWD3*, *CCND2*, *EXT2*, *GPC3*, *HEPACAME*, *KIF7*. Gray boxes containing 'NA' values indicate instances in which exon sequences could not be aligned for the respective species (due to extensive gaps in that area of the genome).

Supplementary Table S5. Accession numbers for candidate genes 9-16

This table contains accession numbers for sequences used in analyses for 8 of the 16 candidate genes: *MTOR*, *OFD1*, *PIK3CA*, *PTEN*, *RIN2*, *SPRED1*, *STRADA*, *TBC1D7*. Gray boxes containing 'NA' values indicate instances in which exon sequences could not be aligned for the respective species (due to extensive gaps in that area of the genome).

Supplementary Table S6. Brain and body mass for 23 primate species

This table contains brain and body masses are provided in grams, and sources for these data (in addition to any relevant notes) are also listed.

Supplementary Files

Each '*gene_name_seq.phy*' file contains the alignment compiled for that candidate gene using Geneious (see Methods).

Supplementary Table S1. Additional results for Aim 2: Testing whether selection pressure on megalencephaly-associated genes is linked to measures of primate brain size when *Callithrix* and *Microcebus* are excluded
